Exp 7

Integrating a Zoho Creator application with another Zoho service using connections and APIs

Job Application Form — Bigin by Zoho CRM Integration Use Case

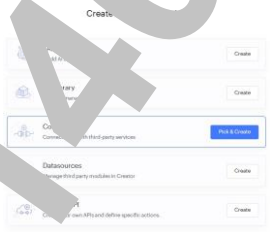

1. Aim

To integrate a Zoho Creator application with Bigin by Zoho CRM using a microservice connection, a form workflow, and Deluge scripting, so that the details submitted through the Job Application form are created automatically as a record in Zoho CRM.

2. Procedure

Phase A: Creating the Bigin by Zoho CRM Connection

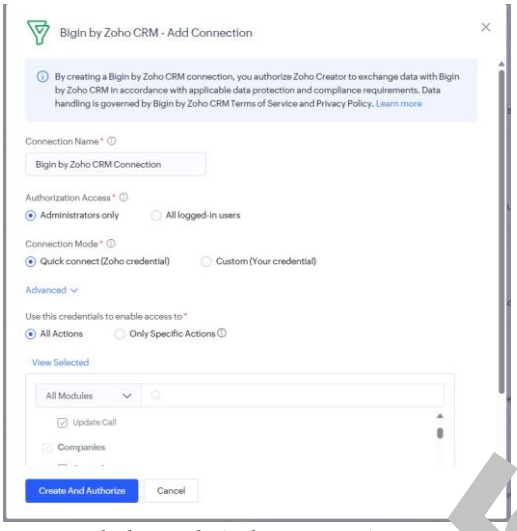

1. Log in to your Zoho Creator developer account and open the Job Application Form application.
2. In the left navigation panel under the Develop section, click **Microservices** to access the centralized integration environment.
3. Click **Create New**. On the Create New Microservice page, choose **Connections** (Connect apps with third-party services) and click **Pick & Create**.

The Create New Microservice page showing AI Models, AR Library, Connections, Datasources and Custom API; Pick & Create is used on the Connections card.

4. From the Built-in Connector list, select **Bigin by Zoho CRM**. In the Bigin by Zoho CRM – Add Connection dialog, keep the Connection Name as *Bigin by Zoho CRM Connection*.
5. Set Authorization Access to **Administrators only**, Connection Mode to **Quick connect (Zoho credential)**, and enable access to **All Actions**. Click **Create And Authorize**.

The Bigin by Zoho CRM – Add Connection dialog with Authorization Access set to Administrators only, Connection Mode set to Quick connect (Zoho credential), and access enabled for All Actions, followed by Create And Authorize.

Phase B: Verifying the Connection

6 After authorization, the connection opens under Microservices. Confirm that **Bigin by Zoho CRM Connection** shows the **Enabled** status with the link name `bigin_by_zoho_crm_connection`, the authorization as *Same for all the environments*, and the authorization owner as Administrator.

7 Under Connection Access, confirm that the toggle for **Job Application Form** is turned **On**. Note the link name, as it is the reference used to call the connection from the form workflow script.

The Bigin by Zoho CRM connection page (link name bigin_by_zoho_crm_connection) with the Enabled status and Connection Access turned On for the Job Application Form application.

Phase C: Setting Up the Form Workflow

8 Navigate back to the application, select the Job Application form that submits the request, and click the **Workflow** tab in the top header.

9 Create a new form workflow that executes on **Created > Successful form submission**.

10 In the Add New Action panel, set **Run this action** to *Always*, so that every successful submission is sent to Zoho CRM, and choose **Deluge script** from the Action type grid.

Phase D: Compiling the Deluge Script Code

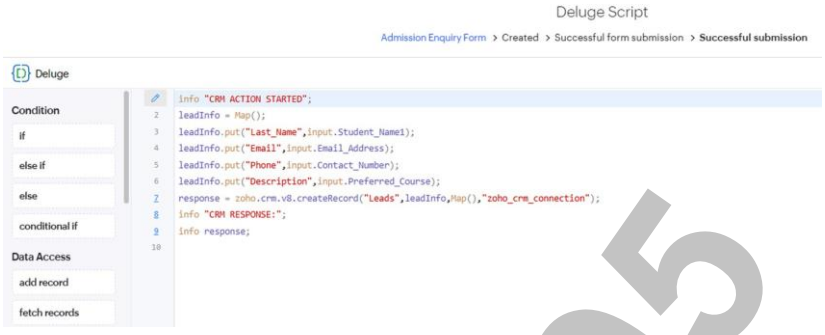

11 In the Deluge editor, initialize a map named `leadInfo` and map the form fields to the Zoho CRM fields: the applicant's name to Last_Name, Email_Address to Email, Contact_Number to Phone, and the position applied for to Description.

2140095

12 Call `zoho.crm.v8.createRecord("Leads", leadInfo, Map(), "zoho_crm_connection")` to create the record through the connection link name, and store the result in `response`.

13 Use `info` statements to trace the start of the CRM action and the response returned by Zoho CRM.

14 Click **Save** to run the compiler validation and save the script.

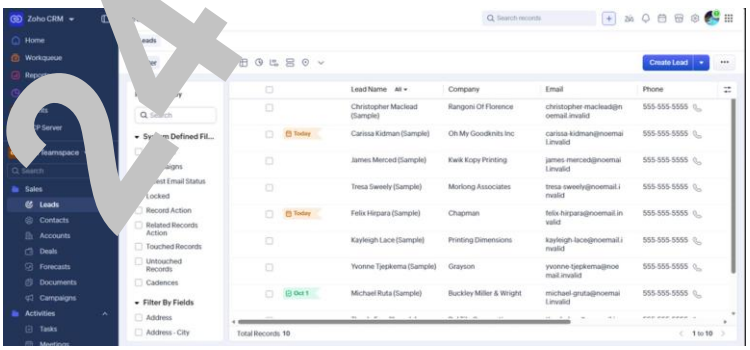

The Deluge Script editor for the form workflow (Created > Successful form submission > Successful submission). The script builds the leadInfo map, calls zoho.crm.v8.createRecord for the Leads module using the connection, and traces the response using info.

3. Output & System Verification

The integration between the Job Application Form and Zoho CRM was set up through a microservice connection and a Deluge workflow. As seen in the Microservices interface, the Bigin by Zoho CRM connection is established and available.

- **Connection Diagnostic Result:** Enabled (connection authorized by the administrator and shared across all environments)
- **Operational Availability:** The connection link name `bigin_by_zoho_crm_connection` is available for reference in the form workflow script, and Connection Access is On for the Job Application Form application.
- **Target Module:** Records created by the workflow are added to the Leads module of Zoho CRM, shown below.

The Zoho CRM Leads module, the destination module for records created by the createRecord call in the workflow.

4. Conclusion

The lab exercise demonstrates how to connect a low-code application to another Zoho service using microservices, form workflows, and custom Deluge scripting. By linking the form submission to the Zoho CRM connection, the Job Application Form project establishes a working proof-of-concept in which submitted applicant details are pushed automatically into Zoho CRM.
