Exp 4: Data Modelling and Form Design for a Business Application in Zoho Creator (Job Application Form)

Name: Shamruti S | Register No: 241401095 | Department: CSBS

1. Aim

To design and build a functional “Job Application Form” application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder, while solving a real HR requirement of collecting and screening job applications in a structured manner.

2. Procedure

2.1 Problem Statement & Application Scope

The HR department of a mid-sized company receives job applications through emails, walk-ins, and referrals, in inconsistent formats such as PDFs, photos of resumes, and WhatsApp messages. This makes it difficult to filter candidates by department, experience, or skill set, and interview scheduling is done manually over phone calls.

Design a low-code application using Zoho Creator that allows a candidate to submit a job application through a single online form. The form must capture personal identity, contact details, job preference, experience, skills, and consent for background verification — using every Basic Field type provided by Zoho Creator's Form Builder.

Application Name: Recruitment & Job Application Management | Form Name: Job_Application_Form | Primary Users: External job candidates / HR Recruitment team | Report View: Candidate_Application_Report

2.2 Data Model & ER Diagram

A Data Model consists of both the visual Entity–Relationship (ER) diagram showing schema relationships and the structured Data Dictionary table defining field types and constraints. The diagram below represents the schema generated for Job_Application_Form, showing the primary form entity, composite data structures, and the choice/lookup entities, connected through explicit relationships with cardinality (1:1, 1:N, M:N).

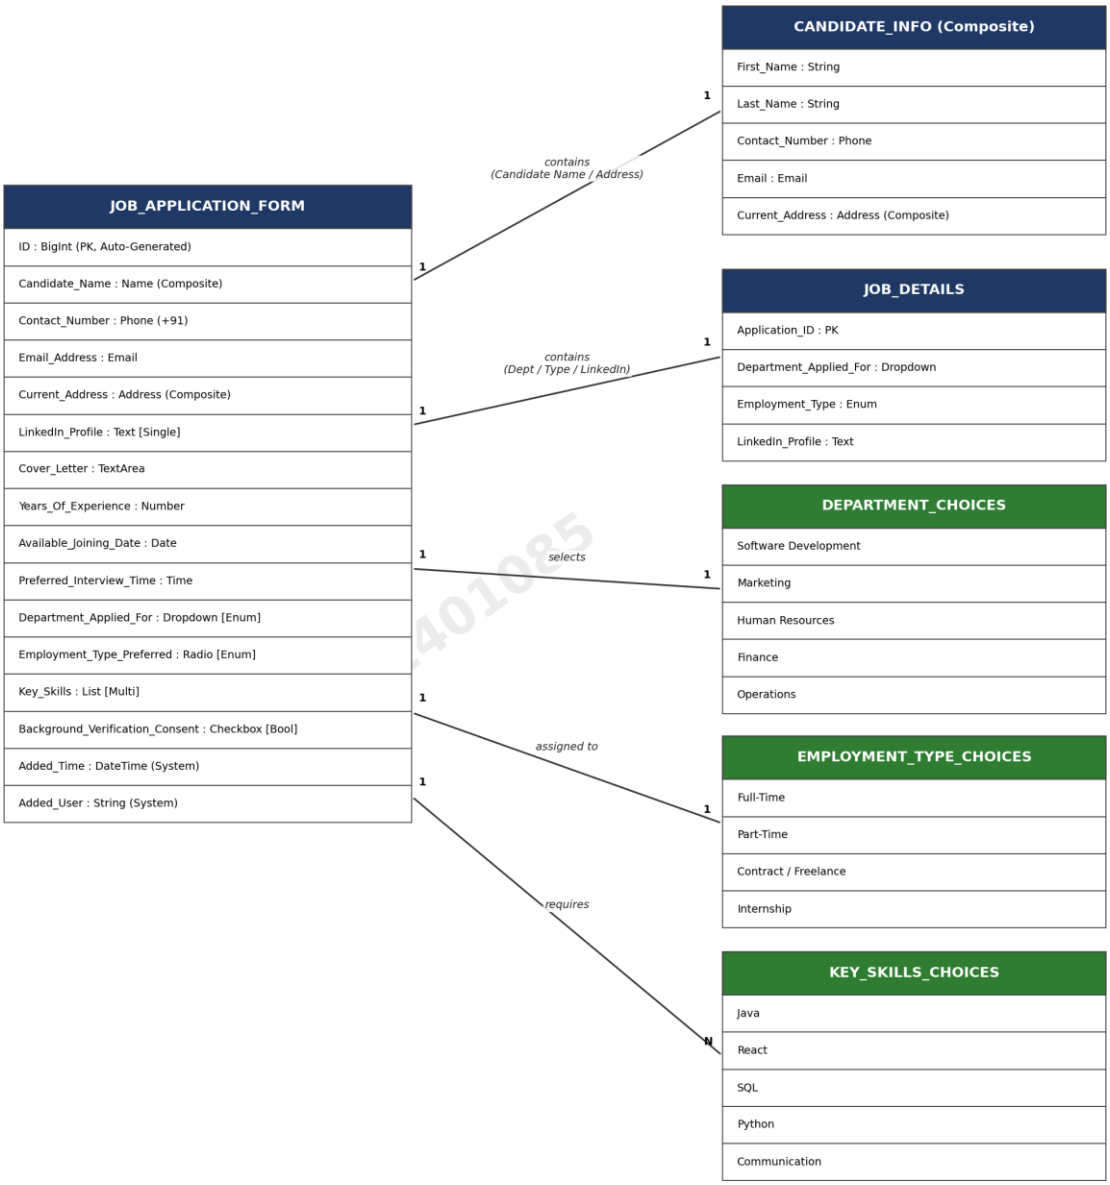

Figure 1: Entity–Relationship (ER) Schema Diagram for Job Application Form

2.3 Basic Fields Mapping & Data Dictionary

Table 1 presents the mapping of all thirteen Basic Fields from the Zoho Creator Form Builder palette to their specific roles, purpose, and general sample values.

Basic Field	Form Field Name	Purpose & Validation Constraints	Sample Value
Name	Candidate_Name	Captures the full name of the applicant using First/Last name sub-fields	Arjun Kumar
Email	Email_Address	Captures a validated email address for sending acknowledgement and interview updates	arjun.kumar@example.com
Address	Current_Address	Captures the candidate's full current residential address with city, state, and pincode	45, Gandhi Street, Coimbatore, TN, 641001
Phone	Contact_Number	Captures a validated mobile number for HR to call the candidate	+91 90000 12345
Single Line	LinkedIn_Profile	Captures a short single-line text such as the candidate's LinkedIn/portfolio URL	linkedin.com/in/arjunkumar
Multi Line	Cover_Letter	Captures free-text remarks on why the candidate is suitable for the role	I have 3 years of experience in full-stack development and led two product launches.
Number	Years_Of_Experience	Captures a numeric value with validation for total years worked	3
Date	Available_Joining_Date	Captures the earliest date the candidate can join, using a date picker	01-Sep-2026
Time	Preferred_Interview_Time	Captures the candidate's preferred time slot for a telephonic/video interview	3:30 PM
Drop Down	Department_Applied_For	Presents a single-select list of departments/roles open for hiring	Software Development
Radio	Employment_Type_Preferred	Captures a single mandatory selection among mutually exclusive employment types	Full-Time
Multi Select	Key_Skills	Allows selection of one or more technical/functional skills relevant to the role	Java, React, SQL, Communication
Checkbox	Background_Verification_Consent	Captures the candidate's consent to undergo background verification if selected	Checked (Agreed)

Table 1: Mapping and Specification of Thirteen Basic Fields in Job_Application_Form

2.4 Form Layout & Configuration Steps

The Job_Application_Form was organized into four logical, candidate-friendly sections:

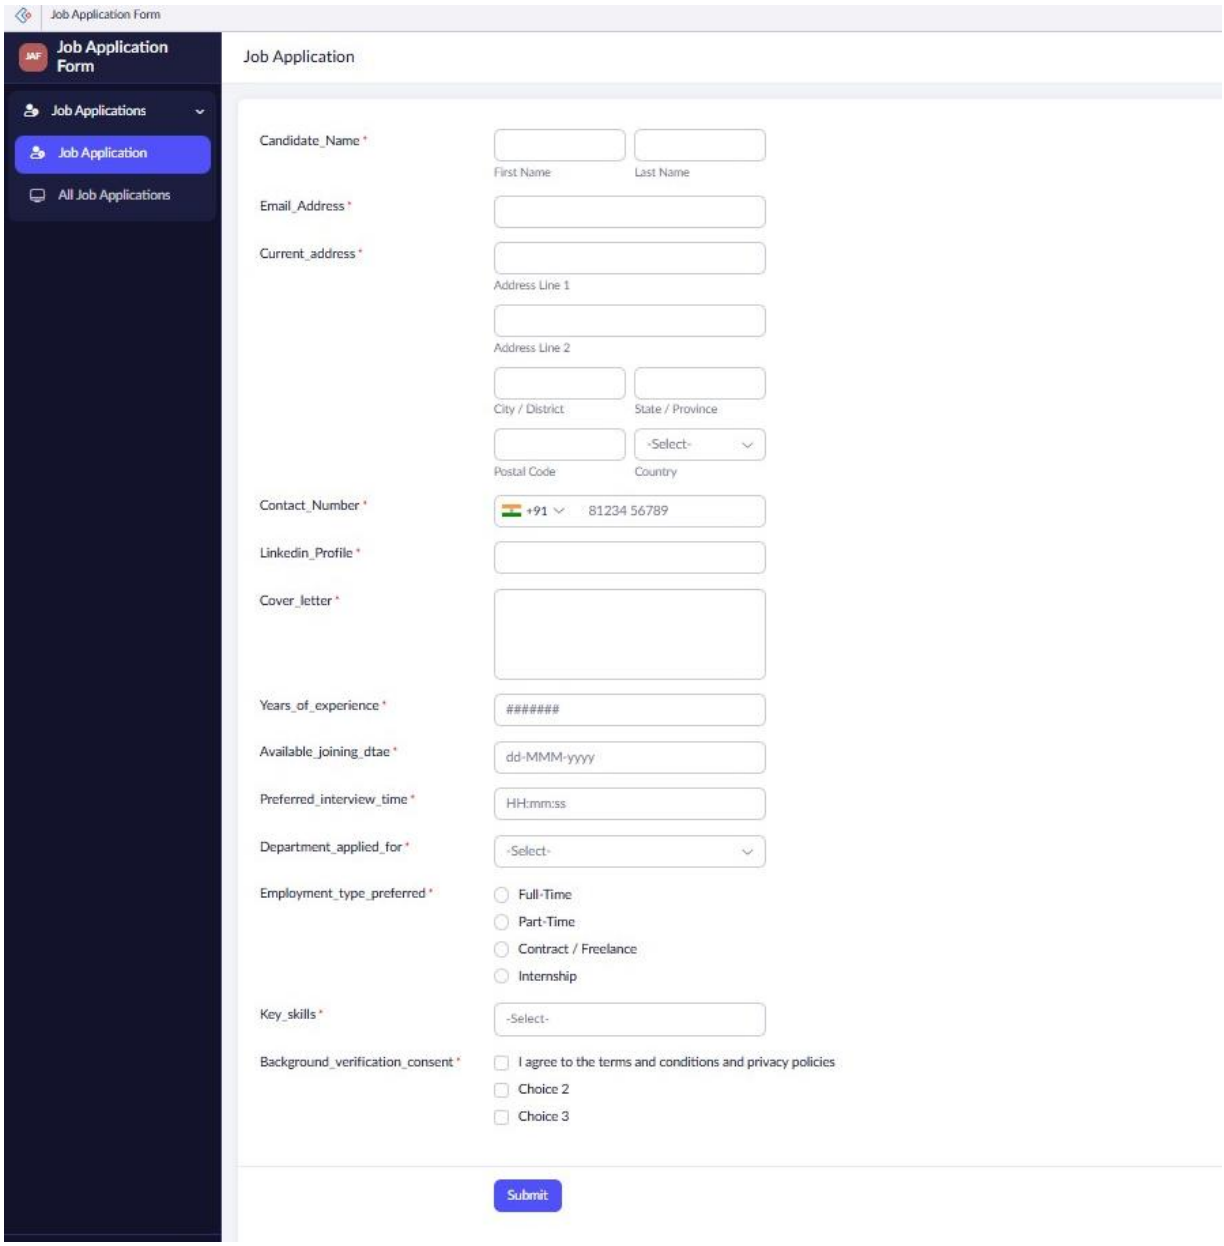

- **Section A — Personal Details:** Candidate Name (Name), Current Address (Address), Contact Number (Phone).
- **Section B — Contact & Online Presence:** Email Address (Email), LinkedIn / Portfolio URL (Single Line).
- **Section C — Job & Experience Details:** Department Applied For (Drop Down), Employment Type Preferred (Radio), Years of Experience (Number), Key Skills (Multi Select), Available Joining Date (Date).
- **Section D — Interview Scheduling & Consent:** Preferred Interview Time (Time), Cover Letter (Multi Line), Background Verification Consent (Checkbox).

Validation rules configured: Candidate Name, Email, Contact Number, Department Applied For, Employment Type, and the Consent Checkbox are mandatory fields; the Email field uses built-in email format validation; the Phone field uses the Indian country-code format; the Number field (Years of Experience) is restricted to a range of 0–40; the Date field disallows past dates for Available Joining Date; and the form cannot be submitted unless the consent Checkbox is checked.

3. Output

The following figures show the live preview of the form and the submitted application records in the report view:

Figure 2: Live Application Runtime Preview for Job_Application_Form Entry

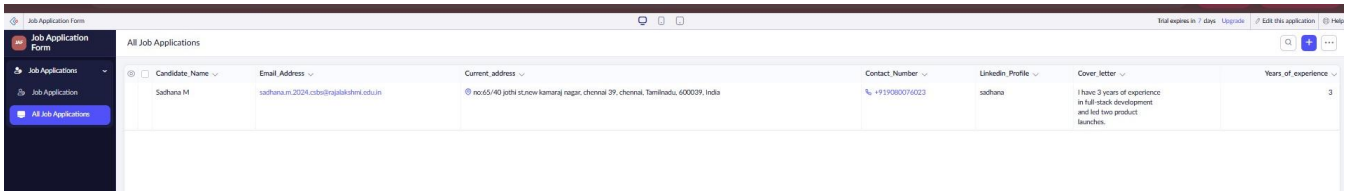

Figure 3: All_Job_Applications Report View Displaying Submitted Records

4. Result

The “Job Application Form” application was successfully built in Zoho Creator using all thirteen Basic Fields, with full field validations, section layout formatting, ER schema modeling, and report view generation meeting all assignment requirements.
